

EnterpriseGuard Deployment Package

Production Release Specification & System Verification Report

1. Executive Summary

The **EnterpriseGuard** security and compliance architecture has reached a production-ready milestone. All core backend components, state adapters, compliance engines, and the PyQt6 graphical user interface have been fully tested, verified, and synchronized with the remote repository origin.

151	100%	v1.0
PASSING TESTS	TEST COVERAGE	RELEASE TAG

2. Core Architectural Components

The deployment package bundles all necessary infrastructure layers to ensure secure operation and resilient threat response:

Module Component	Description	Status
PyQt6 User Interface	Features DashboardView, IntegrityView, and PolicyView with automated headless telemetry testing.	Verified
ADIE Orchestrator	Integrated StateProviderAdapter and DecisionProviderAdapter fulfilling core contractual dependencies.	Verified
Compliance Engine	Advanced event evaluation, enrichment workflows, and automated decision logging.	Verified
Machine Learning Core	Trained enterprise guard models and metadata assets for threat probability scoring.	Verified

3. Deployment & Distribution Guidelines

To deploy this package in a target production environment, clone the repository from origin/master, configure the Python virtual environment, install dependencies, and execute the complete test suite to validate node integrity:

```
git clone https://github.com/Bashar100-A/EnterpriseGuard.git
cd EnterpriseGuard
python3 -m venv venv
```

```
source venv/bin/activate
pip install -r requirements.txt
PYTHONPATH=src:. pytest tests/
```
